Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

9

Office Action Summary	Application No. 10/685,192	Applicant(s) MEWHERTER ET AL.	
	Examiner James J. Debrow	Art Unit 2176	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 05 September 2007.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-22 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-22 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. This action is responsive to communications: Remarks filed 05 Sep. 2007.
2. Claims 1-22 are pending in this case. Claims 1, 6, and 16 are independent claims.

Applicant's Response

3. Applicant amended independent Claims 6 and 14; argued rejections of previous office action.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-4, 6, 7, 12, 14, 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Estrada et al. (Pub. No.: 2002/0152234 A1; Filing Date: Dec. 29, 2000) (hereinafter 'Estrada'), in view of Chakraborty (Pub. No.: 2004/0194035 A1; Filing Date: Mar. 31, 2000) (hereinafter 'Chakraborty').

In regards to independent claim 1, Estrada discloses *a system for converting slide show presentations for use within non-presentation applications, the system comprising:*

a slide show produced by a slide show presentation application and stored in a native format (0351; Estrada discloses a Powerpoint 97 (.PPT) file stored in it's native .PPT format.).

a slide show conversion process configured for coupling to a non-presentation application (0351; Estrada discloses a Powerpoint 97 (.PPT) file stored in it's native .PPT format, which is converted to HTML format.)

Estrada does not expressly disclose a conversion process programmed both to extract contextual data from said slide show in its native format, and also to convert associated slides in said slide show to raster imagery for use in said non-presentation application.

However Chakraborty teaches *a conversion process programmed both to extract contextual data from said slide show in its native format, and also to convert associated slides in said slide show to raster imagery for use in said non-presentation application (0017; 0020; 0027; Fig. 1; Chakraborty teaches extracting text and non-text (i.e., images) information from an electronic document, such as PDF file. Chakraborty also teaches files such as PDF or any raster-based document is processed by a form extraction system to generate an output file. Thus Chakraborty teaches the concept of converting files to raster imagery.).*

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

In regards to dependent claim 2, Estrada does not expressly disclose *the system of claim 1, wherein said contextual data comprises a slide title for each one of said associated slides.*

However Chakraborty teaches *contextual data comprises a slide title for each one of said associated slides* (0020; 0029; 0032; 0036; Chakraborty teaches extracting text and non-text (i.e., images) information from an electronic document. Chakraborty further teaches extracting titles and fields along with their coordinates and their styles.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

In regards to dependent claim 3, Estrada does not expressly disclose *the system of claim 1, wherein said contextual data comprises important text associated with each one of said associated slides.*

However Chakraborty teaches *contextual data comprises important text associated with each one of said associated slides* (0020; 0022; 0024; Chakraborty

teaches extracting important form information within portions that has been recognized by the system, i.e. lines as lines, text as text, etc., as well as form information that lies within images.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

In regards to dependent claim 4, Estrada does not expressly disclose *the system of claim 1, wherein said slide show conversion process further comprises programming for generating a markup language document and for disposing said contextual data and said raster imagery within said markup language document.*

However Chakraborty teaches *generating a markup language document and for disposing said contextual data and said raster imagery within said markup language document* (0010; 0021; 0056; Chakraborty teaches the extracted information is stored as an XML (extensible markup language) file that follows a predefined DTD (document type definition. Thus Chakraborty teaches disposing said contextual data and said raster imagery within said markup language document.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

In regards to independent Claims 6 and 16, Estrada discloses *a slide show presentation produced by a slide show presentation application* (0351; Estrada discloses a Powerpoint 97 (.PPT) file stored in it's native .PPT format.).

Estrada does not expressly disclose *extracting a slide title for a first slide in the slide show presentation;*

converting said first slide into a raster image;

disposing both said slide title and said raster image in a markup language document;

repeating said extracting, converting and disposing steps for a selected group of other slides in the slide show presentation;

Chakraborty teaches *extracting a slide title for a first slide in the slide show presentation* (0020; 0029; 0032; 0036; Chakraborty disclose extracting text and non-text (i.e., images) information from an electronic document. Chakraborty further disclose extracting titles and fields along with their coordinates and their styles.).

converting said first slide into a raster image (0017; 0020; 0027; Fig. 1; Chakraborty disclose extracting text and non-text (i.e., images) information from an electronic document, such as PDF file. Chakraborty also disclose files such as PDF or any raster-based document is processed by a form extraction system to generate an output file. Thus Chakraborty discloses the concept of converting files to raster imagery.).

disposing both said slide title and said raster image in a markup language document (0010; 0020; 0021; 0029; 0032; 0036; 0056; Chakraborty disclose extracting text and non-text (i.e., images) information from an electronic document. Chakraborty further disclose extracting titles and fields along with their coordinates and their styles Chakraborty disclose the extracted information is stored as an XML (extensible markup language) file that follows a predefined DTD (document type definition.).

repeating said extracting, converting and disposing steps for a selected group of other slides in the slide show presentation (It would have been obvious to one of ordinary skill in the art that the steps of extracting, converting and disposing would be repeated for all selected group of slides within the slide show presentation.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

In regards to dependent claims 7 and 17, Estrada does not expressly disclose *further extracting important text from said first slide.*

annotating said raster image of said first slide in said markup language document with said extracted important text.

further repeating said repeating, further extracting and annotating steps for a selected group of other slides in the slide show presentation.

Chakraborty teaches *further extracting important text from said first slide* (0020; 0029; 0032; 0036; Chakraborty teaches extracting text and non-text (i.e., images) information from an electronic document. Chakraborty further disclose extracting titles and fields along with their coordinates and their styles.).

annotating said raster image of said first slide in said markup language document with said extracted important text (0010; 0037; Chakraborty disclose XML files which are referred to as Anchorable Information Unit (AIU) files. Chakraborty disclose combining a partial AIU file that contains extracted form information with another partial AIU file that contains extracted form information for non-text (images) portions of the input file. Therefore Chakraborty disclose *annotating said raster image of said first slide in said markup language document with said extracted important text.*)

further repeating said repeating, further extracting and annotating steps for a selected group of other slides in the slide show presentation (It would have been obvious to one of ordinary skill in the art that the steps of extracting, and annotating would be repeated for all selected group of slides within the slide show presentation.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

In regards to dependent claim 12, Estrada does not expressly disclose *the method of claim 6, further comprising the step of processing said markup language document in a non-presentation application.*

Chakraborty teaches *the method of claim 6, further comprising the step of processing said markup language document in a non-presentation application* (0028; 0078).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

In regards to dependent claim 14, Estrada does not expressly disclose *the method of claim 6, further comprising the step of performing each of said extracting, disposing, converting and repeating steps in externally to a slide show presentation application which produced the slide show presentation.*

Chakraborty teaches *the method of claim 6, further comprising the step of performing each of said extracting, disposing, converting and repeating steps in externally to a slide show presentation application which produced the slide show presentation* (0020-0025; Chakraborty disclose the steps of extracting, disposing, converting text and non-text formed information.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing

an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

6. It is noted that any citations to specific, pages, columns, lines, or figures in the prior art references and any interpretation of the reference should not be considered to be limiting in any way. A reference is relevant for all it contains and may be relied upon for all that it would have reasonably suggested to one having ordinary skill in the art. See MPEP 2123.

7. **Claims 5, 8, 9, 15, 18, 19 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Estrada in view of Chakraborty, further in view of Erol et al. (Pub. No.: 2004/0202349 A1; Filing Date: Mar. 31, 2003) (hereinafter 'Erol').**

In regards to dependent claim 5, Estrada in view of Chakraborty does not expressly disclose *the system of claim 1, wherein said slide show conversion process further comprises programming for reducing said raster imagery to a size suitable for display in a pervasive device.*

However Erol teaches *reducing said raster imagery to a size suitable for display in a pervasive device* (0041; Erol teaches user interface output devices that in intended to include all possible types of devices and ways to output information from data

processing system. Thus it would have been obvious to one of ordinary skill in the art to reduce said raster imagery to a size suitable for display in a pervasive device.).

Therefore, at the time of the invention it would have been obvious to one of ordinary skill in the art to combine Estrada in view of Chakraborty with Erol for the benefit of providing/displaying a region of interest of an image input, which may cover the entire input image or a portion thereof, comprising presentation information during a presentation, which includes a meeting, a conference, a lecture, etc. The presentation information may comprise or correspond to information in a slide, a web page, charts, documents, etc. (0032).

In regards to dependent claims 8 and 18, Estrada in view of Chakraborty does not expressly disclose *wherein said further extracting step comprises the step of further extracting text having formatting characteristics within said first slide which emphasizes said text.*

However Erol teaches *extracting text having formatting characteristics within said first slide which emphasizes said text* (0031; 0112; 0116; Erol teaches extracting text having formatting characteristics such as color and font size.).

Therefore, at the time of the invention it would have been obvious to one of ordinary skill in the art to combine Estrada in view of Chakraborty with Erol for the benefit of providing/displaying a region of interest of an image input, which may cover the entire input image or a portion thereof, comprising presentation information during a

presentation, which includes a meeting, a conference, a lecture, etc. The presentation information may comprise or correspond to information in a slide, a web page, charts, documents, etc. (0032).

In regards to dependent claims 9 and 19, Estrada in view of Chakraborty does not expressly disclose *wherein said formatting characteristics comprise a point size which exceeds a threshold value*.

However Erol teaches *said formatting characteristics comprise a point size which exceeds a threshold value* (0116; Erol teaches the formulation for threshold selection includes a constant typically based the amount and size of the text in an image. Thus Erol teach or suggest the concept or technique of formatting characteristics comprise a point size which exceeds a threshold value.).

Therefore, at the time of the invention it would have been obvious to one of ordinary skill in the art to combine Estrada in view of Chakraborty with Erol for the benefit of providing/displaying a region of interest of an image input, which may cover the entire input image or a portion thereof, comprising presentation information during a presentation, which includes a meeting, a conference, a lecture, etc. The presentation information may comprise or correspond to information in a slide, a web page, charts, documents, etc. (0032).

In regards to dependent claims 15 and 22, Estrada does not expressly disclose *reducing said raster image to a size suitable for display in a pervasive device*;

rendering said slide title and said reduced raster imagery in a pervasive device display.

Chakraborty disclose *rendering said slide title* (0020; 0029; 0032; 0036; Chakraborty discloses extracting text and non-text (i.e., images) information from an electronic document. Chakraborty further discloses extracting titles and fields along with their coordinates and their styles.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada with Chakraborty for the benefit of providing an information extraction process for extracting form information associated with text portions and/or non-text portion within an electronic document (0017).

Chakraborty does not expressly disclose *reducing said raster image to a size suitable for display in a pervasive device;*

However Erol teaches *reducing said raster imagery to a size suitable for display in a pervasive device* (0041; Erol teaches user interface output devices that in intended to include all possible types of devices and ways to output information from data processing system. Thus it would have been obvious to one of ordinary skill in the art to reduce said raster imagery to a size suitable for display in a pervasive device.).

Therefore, at the time of the invention it would have been obvious to one of ordinary skill in the art to combine Estrada in view of Chakraborty with Erol for the benefit of providing/displaying a region of interest of an image input, which may cover the entire input image or a portion thereof, comprising presentation information during a presentation, which includes a meeting, a conference, a lecture, etc. The presentation information may comprise or correspond to information in a slide, a web page, charts, documents, etc. (0032).

8. It is noted that any citations to specific, pages, columns, lines, or figures in the prior art references and any interpretation of the reference should not be considered to be limiting in any way. A reference is relevant for all it contains and may be relied upon for all that it would have reasonably suggested to one having ordinary skill in the art. See, MPEP 2123.

9. **Claims 10, 11, 13, 20 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Estrada in view of Chakraborty, further in view of Chatterjee et al. (Patent No.: US 7,162,691 B1; Filing Date: Feb. 1, 2000) (hereinafter 'Chatterjee').**

In regards to dependent claims 10 and 20, Estrada in view of Chakraborty does not expressly disclose *wherein said annotating step comprises the step of generating an ALT tag with said important text in association with said raster image in*

said markup language document.

However Chatterjee teaches *generating an ALT tag with said important text in association with said raster image in said markup language document* (col. 2, lines 30-37; Chatterjee teaches XML documents may contain markup tags which identify non-text data, such as image, audio or video data, or program files. Therefore, at the time of the invention it would have been obvious to one of ordinary skill in the art to provide a markup language document containing an ALT tag with said important text in association with said raster image.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada in view of Chakraborty with Chatterjee for the benefit of providing markup language documents containing markup tags which identify non-text data, such as image, audio or video data, or program files (col. 2, lines 30-37).).

In regards to dependent claims 11 and 21, Estrada in view of Chakraborty does not expressly disclose *wherein said generating step further comprises the step of formatting said ALT tag with additional inline indicators for facilitating an audible playback of said important text in a non-presentation application.*

However Chatterjee teaches *the step of formatting said ALT tag with additional inline indicators for facilitating an audible playback of said important text in a non-presentation application* (col. 2, lines 30-37; col. 4, lines 51-62; Chatterjee teaches XML

documents may contain markup tags which identify non-text data, such as image, audio or video data, or program files.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada in view of Chakraborty with Chatterjee for the benefit of providing markup language documents containing markup tags which identify non-text data, such as image, audio or video data, or program files (col. 2, lines 30-37).).

In regards to dependent claim 13, Estrada in view of Chakraborty does not expressly disclose *the method of claim 12, wherein said processing step comprises the step of generating an agenda with each slide title for each raster image in said markup language document*. Chakraborty disclose extracting text and non-text (i.e., images) information from an electronic document. Chakraborty further discloses extracting titles and fields along with their coordinates and their styles (0020; 0029; 0032; 0036).

Chatterjee teaches *wherein said processing step comprises the step of generating an agenda with each slide title for each raster image in said markup language document* (col. 2, lines 30-37; col. 4, lines 51-62; Chatterjee teaches XML documents may contain markup tags which identify non-text data, such as image, audio or video data, or program files. It would have been obvious to one of ordinary skill in the art to modify Chakraborty's teaching with Chatterjee's teaching of markup tags for

the benefit of generating an agenda with each slide title for each raster image in said markup language document.).

Therefore at the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Estrada in view of Chakraborty with Chatterjee for the benefit of providing markup language documents containing markup tags which identify non-text data, such as image, audio or video data, or program files (col. 2, lines 30-37).).

10. It is noted that any citations to specific, pages, columns, lines, or figures in the prior art references and any interpretation of the reference should not be considered to be limiting in any way. A reference is relevant for all it contains and may be relied upon for all that it would have reasonably suggested to one having ordinary skill in the art. See, MPEP 2123.

Response to Arguments

11. Applicant's arguments filed 05 Sep. 2007 have been considered but are not persuasive.

Applicant argues *Chakraborty* for its part entirely lacks any teaching relating to a "slide show", a "slide show presentation application", or a "slide". Rather, *Chakraborty* only teaches the extraction of text from a PDF when reading a PDF form. Estrada, in

turn, teaches only the conversion of a slide in a slide show into an HTML document. In order to satisfy a prima facie case of obviousness under M.P.E.P. 2143, the Examiner must locate every recited element of the rejected claim in the references as cited. In this case, the Examiner has not located the extraction of contextual data from said slide show in its native format. Rather, the Examiner merely has located the extraction of data from a PDF file.

In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Conclusion

12. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

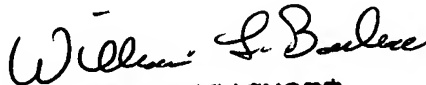

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James J. Debrow whose telephone number is 571-272-5768. The examiner can normally be reached on 8:00-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Doug Hutton can be reached on 571-272-4137. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
